Gripping surface: 2,0mm thick rubber material

Additional items: textile lacing hooks, rubber toe cap, nylon laces

Especially developed for climbing arborists!

rubber toe cap

Indigo-sole

sympatex®
tissue

The « tango » climbing boot was specifically developed to meet the needs of the arborist climbers. The soft sole offers excellent adhesion in trees and allows climbing on slippery and wet branches. This remarkable adhesion was achieved thanks to the input of plasticizer in the outer sole. For this reason, it is recommended not to use intensively the Tango boot on rough surfaces such as tarmac, stones, rocks, etc. to avoid premature wearing of the sole.
